Model AG 1024 is a robust source of RF power for ultrasonic, laser modulation, RFI/EMI, plasma generation, laboratory and general industrial applications.

Featuring state-of-the-art design of all amplifier stages and a built-in DDS signal source, it provides everything for a complete and reliable, controlled RF power delivery system.

The AG 1024 produces 2,000 Watts of linear power over a frequency range from lower than 20 kHz to over 3 MHz, with low harmonic and intermodulation distortion. It operates without band switching or adjustment.

The Front Panel offers a LCD display of Forward, Reflected and Load Power readings, RF Status, MGC/AGC setups and operating frequency when in Generator Mode.

When used as an amplifier, the AG 1024 is compatible with most signal and function generators, computer synthesizer cards and accurately reproduces all waveforms within its limits.

The Forced-air cooling system and the internal power supply are designed to support operation over most temperature and AC conditions.

AG 1024 is protected by its internal control system for 2,000 Watts Forward and 400 Watts Reflected Power. This protects the amplifier output stage from overdrive at the input and extreme mismatch at the Output.
